DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 11 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

3. Claim 11 states that the material composing the device could be a I-VII compound but this material system is not supported by the specification and neither examples nor possible materials are shown.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1 – 38 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

6. Claims 1 and 20 show a potential gradient due to the piezoelectric effect but do not show under what bias conditions this gradient occurs. Would this occur with zero bias, or at the forward bias necessary for peak emission?

7. Claims 8 and 27 state that the strain extends the light emitting layer in the in an in-plane direction. Does this mean a tensile strain is developed?

Art Unit: 2814

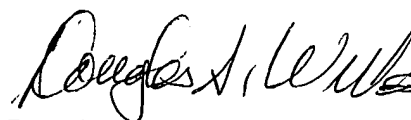

8. Claims 13 – 19 and 32 – 38 state that acceptor levels and/or donor levels are non-uniformly formed. Since the reference is to levels it must be assumed that the acceptors, say, are at different energy levels but this is not supported by the specification. If it is intended to state that the concentration of acceptors, say, is non-uniform it should so state.
9. Comparison of claims 14 – 17 with claims 33 – 36 suggests that claim 35 has an error related to the location of the acceptors.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Douglas A Wille whose telephone number is (703) 308-4949. The examiner can normally be reached on M-F (6:15-3:45).
